Clinical Diagnosis: Acute Gangrenous Cholecystitis with Choledocholithiasis, Biliary Pancreatitis & Severe Sepsis	**Surgical Procedures Performed:** 1. Emergency Therapeutic ERCP + Sphincterotomy + Stone Extraction (04-Mar) 2. Laparoscopic Converted to Open Exploratory Laparotomy, Cholecystectomy & T-Tube Choledochostomy (05-Mar)	**Insurer / TPA:** Care Health Ins. / Vidal Health TPA

EMERGENCY MULTI-STAGE SURGICAL TRIAGE CERTIFICATE:
Patient admitted at 04:15 AM in severe septic shock (BP 80/50, Total Bilirubin 8.4 mg/dL, Amylase 1420 U/L) secondary to impacted common bile duct stone. Immediate emergent ERCP papillotomy was conducted to decompress the infected biliary tree on 04-Mar-2026. Subsequent persistent fever and peritonism warranted emergency cholecystectomy on 05-Mar-2026; due to intense Calot's frozen triangle fibrosis and gangrene, laparoscopic conversion to open laparotomy was performed. Both interventions constituted consecutive life-safety emergency steps of an indivisible inpatient admission.
